

# Scottish Government Rural Affairs, Food and Environment Portfolio

**Strategic Research Programme**  
**1 April 2016- 31 March 2021**

The James  
**Hutton**  
**Institute**

Alison Lees

# Background

2011-16 Programme saw

- James Hutton Institute Merger
- Centres of Expertise and Strategic Partnerships  
links with SG policy teams, HEIs and industry
- Underpinning capacity – e.g. CPC, Pest & Pathogen collections, CSC.

Remaining challenges: Climate change, flooding, competing land use,  
growth of the rural economy

New challenges: food provenance and security, sustainable intensification,  
circular economy to address waste

Partnerships with public bodies, Govt depts, EU etc.

# Key features of 2016-21 SRP

- ‘Integrate evidence base to underpin development and implementation of complex policies in areas such as Climate Change, Land use and Food & Drink’
- Three Themes
- Cross-MRP working
- Knowledge Exchange remains critical – centralised KE function.

The screenshot displays the Scottish Government website (Riaghaltas na h-Alba) with the following elements:

- Header:** Scottish Government logo and name in Gaelic and English. Navigation links for Contacts and Help. A search bar labeled "Search this site".
- Navigation:** A menu with links for Home, About, Topics, News, Publications, and Consultations. A "Text size" adjustment tool is visible on the right.
- Breadcrumbs:** "You are here: | Topics | Research | About Research | Rural Affairs and Environment Strategic Research |".
- Main Content:** A section titled "Rural Affairs and the Environment Strategic Research" with the text: "The Scottish Government provides over £50 million of funding each year towards a portfolio of strategic RAE Science and Research. Most of this research is carried out through the Scottish Government's [Main Research Providers \(MRPs\)](#). Research in these institutes differs from universities in being both directed and long-term. Both of these
- Left Sidebar:** A "Research" menu with sub-items: "About Research", "Rural Affairs and Environment Strategic Research", "Strategic Research Portfolio", and "Main Research Providers".
- Right Sidebar:** An "Also Worth Seeing" section with links to "knowledgescotland", "Biotechnology and Biological Sciences Research Council (BBSRC)", and "Natural Environment Research".
- Footer:** Social media icons for Facebook, Twitter, LinkedIn, and YouTube.

Research Deliverables

Research Deliverables

Research Deliverables

# Theme 1: Natural Assets

The James  
**Hutton**  
Institute

- **WP1.1 Soil**
  - RD1.1.1 Soil & its ecosystem functions
  - RD1.1.2 Soil resilience to change
  - RD1.1.3 Soil & net GHG emissions
  - RD1.1.4 Soil Management
- WP1.2 Water Resources and Flood Risk Management
- WP1.3 Biodiversity and Ecosystems
- WP1.4 Integrated and Sustainable Management of Natural Assets

## Theme 2: Productive and sustainable land management and rural economies

- **WP2.1 Crop & Grassland Production and Disease control\***
  - RD 2.1.1 Genetic Diversity of Crops
  - RD 2.1.2 Crop Genetic Improvement
  - RD 2.1.3 Plant-pest interactions
  - RD 2.1.4 Plant-pest epidemiology
  - RD 2.1.5 In-field detection
  - RD 2.1.6 IPM
  - RD 2.1.7 Plant-soil-water interactions (Philip White)
  - RD 2.1.8 Novel crops (Pete Iannetta)
- WP2.2 Livestock production, health, welfare & disease control

## Theme 2: Productive and sustainable land management and rural economies

- WP2.3 Agricultural systems and land management
  - RD2.3.2 Protecting genetic diversity
  - RD2.3.3 Disease Threats in the environment (Nicola Holden)
  - RD 2.3.4 Sustainable soil and water management (Tim George)
  - RD2.3.9 Integrated management systems (Cathy Hawes)
  - RD 2.3.11 Trade-offs between productivity and sustainability
  - RD2.3.12 Increasing uptake of best practice (Katrin Prager)
- WP2.4 Rural Industries

## Theme 3: Food, Health and Wellbeing

- **WP3.1 Improved food & drink production\*** (Derek Stewart)
  - RD3.1.1 Improving Scottish primary production (Derek Stewart)
  - RD 3.1.2 Improving food & drink production (Gordon MacDougall)
  - RD3.1.3 Food safety (Nicola Holden)
  - RD3.1.4 Preventing food waste
  - RD3.1.5 Food ethics
- **WP3.2 Healthy diets and dietary choice\*** (Derek Stewart)
- WP3.3 Food security
  - RD3.3.1 Food trade and consumption
  - RD3.3.2 Enhancing Food security
  - RD3.3.3 Local Food

## Theme 2: Productive and Sustainable Land Management and Rural Economies

- WP2.1 Crop & Grassland production and disease control

- RD2.1.1 Genetic Diversity of Crops

- RD2.1.2 Crop Genetic Improvement

- RD2.1.3 Plant-pest interactions

- RD2.1.4 Plant-pest epidemiology

- RD 2.1.5 In-field detection

- RD 2.1.6 IPM

- RD 2.1.7 Plant-soil-water interactions

- Builds on CWP5.2, 6.4

### Global – Food Security, Sustainability, Climate Change, Biodiversity

- Reduced pesticide use – environmental concerns & availability
- Alternatives to conventional pesticides
- Sustainable Use of Pesticides Directive - IPM National Action Plans

Resources

Basic  
Mechanisms

Integrated  
Approaches

Delivery to  
end users

# Key aims WP2.1

- ‘To deliver, against a background of environmental change, to sustainable intensification, food security and improved agricultural practice through’:
- Provision of crop cultivars and varieties with improved quality, yield and resource efficiency traits, which are resilient to key biotic and abiotic stresses.
- IPM systems which translate an understanding of plant-pest interactions, host resistance, epidemiology and new disease threats, supported by the use of monitoring, modelling and diagnostic technologies to improve crop performance.
- Outputs that contribute to more efficient production systems, healthier soils and more sustainable rotations delivered through the uptake of best practice.
- Research underpinned by the best use of resources and technologies including germplasm and pest collections, computational analyses, statistical modelling, diagnostics, and metagenomics.

# Key areas (potato)

- **RD2.1.1 Genetic Diversity of Crops** (Glenn Bryan)
- **RD2.1.2 Crop Genetic Improvement** (Mark Taylor)
- Development and acquisition of improved germplasm resources.
- Establishment of a potato core collection from a diverse genebank.
- Development of Backcross Inbred Line (BIL) populations for potato.
- Phenotyping of CPC core and other populations for abiotic stress and resistance traits.
- Phenotyping of potato populations for key quality and developmental traits.
- Potato: genotyping resources for assessing diversity
- Potato tuber dormancy
- Potato tuber greening
- Biotic stress in potato

‘Key outputs will be genetic markers, genes and germplasm that can be exploited by plant breeders to the benefit of Scottish agriculture and its dependent downstream processing industries.’

## RD2.1.3 Plant –pest interactions (John Jones)

- **Pathogen biology**  
Functional analysis of effector-host interactions  
Exploiting pest infection biology for novel control targets
- **Plant Response**  
Achieving sustainable resistance under abiotic stress
- Main potato targets: PCN, Late Blight, aphids
- Identify and characterise key factors that define the outcome of plant-pest interactions and establish how host-pathogen interactions are likely to be affected by temperature and other stresses.
- ‘Research from this deliverable will provide targets for improving pest and disease resistance and novel control methods.’

## 2.1.4 Plant –pest epidemiology (Adrian Newton)

- **Epidemiological modelling**
- **Pathogen populations**
- **Inoculum sources**
  
- Potato Targets: Late Blight, PCN, Pectobacterium, aphids
  
- ‘Through an understanding of key epidemiological parameters and optimal ways of manipulating them, risk management and control of plant diseases can be improved.’

## 2.1.5 In-field detection (Jennie Brierley)

- **In-field diagnostics for soil-borne pests** (tuber blemish, FLN)
  - **In-field diagnostics for air-borne pests** (Alternaria, Late Blight)
  - **Improved application of sensors and satellite imaging for early warning**
  - **In-field detection of important pathogens of rotational crops**
  - **Novel genome-based methods for the development of molecular diagnostics** (Bacteria)
  - **New and emerging threats**
- ‘New developments in pest diagnosis will result in diagnostics that are both relevant to stakeholder needs and fit for the future.’
- ‘The primary outcomes of RD 2.1.5 will be to improve decision making for growers and control recommendations and to inform policy and statutory recommendations, leading to improved disease control.’

## 2.1.6 IPM (Nick Birch)

- **Consolidate/Disseminate IPM methods to deliver best practice**
- **Quantification and ranking of disease risk modifiers**
- **Develop/improve decision support systems**
- **Identify new crop protection tools:** targeted use of pesticides in response to thresholds and predictions; biological control agents including predators, parasitoids and phages; host resistance elicitors and plant defence primers; biopesticides; semiochemicals; host plant resistance etc.
- **Evaluate and combine IPM tools and evaluate efficacy in improving control**
- **Potato IPM 'Toolbox'**
- 'RD2.1.6 will integrate contributions from other RDs (new varietal resistance, monitoring and forecasting tools) and will work closely with stakeholders to prioritise IPM research for each crop system and promote the uptake of best practice for farmers.'

# Stakeholder engagement

‘KE remains a critical deliverable and a responsibility at all levels of the programme funding’

‘Co-construction of research and KE activities with a wide range of stakeholders is an integral part to the planning and delivery of research and KE’

- Early involvement in framing questions and outputs
- Ongoing communication
- Improvements in practice, policy and industry

# Contacts

- Theme 2 – Ian Toth

- WP2.1 - Alison Lees (Diseases), Mark Taylor (Crops)

- Thanks to stakeholders who have already responded to requests for feedback.
- Still a chance to influence content, experimentation and delivery/uptake of results.
